

CENTER FOR ANATOMY AND CELL BIOLOGY
MEDICAL UNIVERSITY OF VIENNA
Division of Cell and Developmental Biology

Laboratory technician in molecular cell biology for epitranscriptome-research

A position as a laboratory technician is open in the group of Michael Jantsch at the Center of Anatomy and Cell Biology of the Medical University of Vienna.

The group studies the impact of RNA modifications on cellular physiology and immunology using animal model systems

<https://www.rna-deco.org/participants.php?participant=jantsch>

The position involves help in setting up experiments, performing experiments and documenting experiments for scientific publications. Training of students and general laboratory organization will also be part of your job.

We are looking for a person with background in molecular cell biology. Accurate documentation and organizational skills are required. Experience in the handling of mice is of advantage.

We are an international team of 10 students / post docs / technicians.

The position is initially advertised for one year but can be extended into a permanent contract.

If you are interested in this position, please send your motivation letter and curriculum vitae, together with names of potential references to:
