

You want to work  
in a **university**  
environment?

But you also want to  
know how to work  
with **industry**?

**Don't worry!**  
acib is the  
perfect choice  
for both!

## Lab technician

in Austria for 30-40 hours a week

### This is us

acib is an international competence centre, developing new, environmentally friendly, economically and technically advanced processes for the biotechnological, pharmaceutical and chemical industry – all of them modelled on nature. With acib you are part of projects whose output is actually and quickly implemented. Work together with us for a better environment and develop advanced processes.

Efficient primary recovery of building-block chemicals produced by microbial processes - such as biobased itaconic acid - is a key step for environmentally sustainable and economically feasible manufacturing processes. Ultrathin membranes have the potential to address these challenges.

### That's what you will do

- 🌱 Synthesis of nanomembranes
- 🌱 Characterization of nanomembranes
- 🌱 Analytical characterization of culture fluids
- 🌱 Separation experiments with bio-based chemicals from fermentation supernatant

### That's important to us

You should have a completed training as lab technician with profound knowledge in chemistry and biotechnology. Additional know-how in related fields such as Bioprocess Engineering are highly appreciated. Furthermore, you should enjoy the work in an international interdisciplinary environment and speak English fluently.

### That's what you should know

- 🌱 minimum monthly gross payment of **EUR 2.252,80 (on a 40-hour basis)**
- 🌱 Start: **15<sup>th</sup> of March 2023**
